

TRAINING COURSE | ONLINE

## MAXIMISING THE POTENTIAL OF *STATA*'S NEW PYTHON CAPABILITIES 9-10 April, 2026

TStat's "Maximising the Potential of *Stata*'s New Python Capabilities" course offers participants an excellent opportunity to acquire the introductory programming skills required to integrate Python's capability into *Stata*. The course opens with an introductory session focusing on the Python programming basics required by users wishing to exploit the *Stata* – Python connectivity, before moving on to illustrate how to use Python in a *Stata* environment and the vice versa. In the closing session a series of practical applications will be discussed in order to highlight WHEN and HOW one should exploit the connectivity between Python and *Stata* for one's research.

At the end of the course, participants are expected to be able, with the aid of the *Stata* routines implemented during the sessions, to independently implement the methodologies and techniques illustrated during the course by adopting the *Stata* routines to their own particular research needs.

In common with TStat's training philosophy, each session is composed of both a theoretical component (in which the techniques and underlying principles behind them are explained) and an applied (hands-on) segment, during which participants have the opportunity to implement the techniques using real data under the watchful eye of the course tutor. Throughout the course, theoretical sessions are reinforced using applied case studies, in which the course tutor discusses and highlights potential pitfalls and the advantages of individual techniques.

### COURSE CODE

D-IN25-OL

### DATE AND LOCATION

The 2026 edition of this training course will be offered online on a part-time basis on the 9th-10th of April from 9:30 am to 2:00 pm CEST.

### TARGET AUDIENCE

This course is of particular interest to sociologists, mathematicians, economists, ethnologists, epidemiologists and political scientists wishing to acquire the basic tools necessary to use Python routines within *Stata*.

### PREREQUISITES

Participants should have a working knowledge of *Stata*. No prior knowledge of Python is necessary, although it will be an advantage.

# MAXIMISING THE POTENTIAL OF STATA'S NEW PYTHON CAPABILITIES

## PROGRAM

1. The potential of *Stata*/Python connectivity: an overview
2. Python programming basics
3. Alternative ways to implement Python in *Stata*: the **PyStata** Module
  - Calling Python from within *Stata*
  - Calling *Stata* from within Python
4. Mata/Python integration
5. Practical examples
  - *Stata* integration of Python **Scikit-learn** for Machine Learning
  - Least squares regression in Mata/Python
  - *Stata*/Python data visualization

## REGISTRATION FEES

Full-Time Students\*: € 520.00

Ph.D. Students: € 670.00

Academic: € 770.00

Commercial: € 900.00

\*To be eligible for student prices, participants must provide proof of their **full-time student** status for the current academic year. Our standard policy is to provide all full-time students, be they Undergraduates or Masters students, access to student participation rates. Part-time master and doctoral students who are also currently employed will however, be allocated academic status.

Fees are subject to VAT (applied at the current Italian rate of 22%). Under current EU fiscal regulations, VAT will not however applied to companies, Institutions or Universities providing a valid tax registration number.

The number of participants is limited to 8. Places will be allocated on a first come, first serve basis. The course will be officially confirmed, when at least 5 individuals are enrolled.

Course fees cover: i) teaching materials – copies of lecture slides, databases and *Stata* programs specifically developed for the course; ii) a temporary licence of *StataNow*™ valid for 30 days from the day before the course commences.

Individuals interested in attending this course must return their completed [registration forms](#) by [e-mail](#) to TStat by the **31st of March 2026**.
