

Subject index

Symbols

±, using Unicode characters 10

A

adjusted R^2 model statistic 35–40, 343

B

base level, customizing display
..... 355–358

beta coefficients 26–35, 314–315

C

cell results, formatting 351–355

χ^2
model statistic 345
using Unicode characters 10

coefficients

beta 26–35, 314–315

formatting 351–355

Cohen's d 77–80, 85–87

collect style autolevels .. 347–350

column labels, customizing 317

commas, formatting results 14

composite result

coefficient and CI 311–313

coefficient and SE 310–311,
313–314

frequencies and percents .. 177–183,
188–189

frequencies and summary statistics
..... 177–183, 188–189

mean ± SD 172–174, 210–212

mean ± SD min-max 174–176

min-max 170–172

N model statistic
20–21, 26–32, 35–72, 229–233,

243–244, 325–340, 343

confidence interval, formatting
..... 351–355

constant see intercept

correlations, table of 88–90, 93–97

by two groups 90–93

with summary statistics ... 98–105,
393–401

custom styles 365–374

D

delimiter of interactions see
factor-variable interaction

ΔR^2 , using Unicode characters 10

display format

including commas 14

leading zeros 13

left-aligned 14

do-files, creating custom styles with ...
..... 374

dtable command 146–212

adding row headers 192–207,
212–214

creating Table 1, one group
..... 112–114, 207–209

creating Table 1, two groups
..... 114–138, 209–212

customizing column header
..... 177–178

customizing labels 153–159

customizing notes 178–179

customizing numeric format
..... 159–161

customizing sample frequency
..... 179–183, 188–189

customizing string format
..... 162–164

customizing title 178–179

dtable command (*continued*)

- grouping results.....183–188,
210–212
- reordering columns of by-group...
.....190–191
- reordering factor variable levels...
.....156–158
- selecting statistics..... 165–169
- tests comparing groups... 185–188
- total column first 190–191,
201–203

E

- ereturn** command 19–21
- error..... 435–444
 - change wrong label..... 438–441
 - forget **collect clear**.... 435–437
 - forget to display label.... 443–444
 - ignore note..... 441–442
 - ignore warning..... 441–442
 - label will not change..... 438–441
 - label will not display..... 443–444
- estimation results 19–21
- etable** command 425–434
 - multiple estimation commands....
.....429–431
 - multiple models 429–431
 - multiple regression 425–429
 - multivariate regression.... 432–434
- example datasets 1
- Excel files
 - adding notes 421–422
 - adding text 423
 - adding titles..... 421–422
 - customizing text..... 423
 - exporting..... 420–423
- exporting
 - Excel files 420–423
 - PDF files..... 414–420
 - Word documents 6, 8, 405–414

F

- F* model statistic 20–21, 26–32, 343
- factor variables.....262–272
 - creating table of contrasting
marginal means..... 270–272
 - creating table of marginal means..
..... 266–269
 - customizing display
(reference level)..... 355–358
 - customizing labels..... 263, 317
 - showing baselevels 263
- factor-variable interaction 273–288
 - delimiter 275
 - marginal means 278–281
 - simple contrasts 285–288
- footnotes.....see notes
- foreach** command 21–24
- formatting
 - coefficients 351–355
 - confidence intervals..... 351–355
 - including commas..... 14
 - leading zeros 13
 - left-aligned..... 14
 - p*-values..... 304–305, 351–355
 - results..... 12–14
 - standard errors 351–355
 - t*-values..... 351–355
- frequencies and percents see
composite result
- frequencies and summary statistics..see
composite result

G

- Greek letters, using Unicode characters
..... 10

H

- headers
 - adding 319–320
 - customizing 315–325
 - duplicating 319–320
- hierarchical regression.....see nested
regression

I

interactions of factor variables see
 factor-variable interaction
 intercept, position 222
 italic letters, using Unicode characters
 10

L

labels, customizing 315–325
 layouts, table
 multinomial logistic regression
 299–300
 multiple models 242–244
 multiple multivariate models
 257–261
 multiple regression 223–229
 leading zeros, formatting results 13
 left-aligned, formatting results 14
 log-likelihood model statistic 345
 logistic regression 289–291
 model statistics 344–346
 multinomial see multinomial
 logistic regression
 odds ratio 289–290
 raw coefficients 290–291
 looping over variables 21–24

M

macros 14–15
 manipulating 15–17
 marginal means
 contrasting by factor variables see
 factor variables
 interaction see factor-variable
 interaction
 mean \pm SD composite result . . 172–174,
 210–212
 mean \pm SD min-max composite result
 174–176
 min-max composite result 170–172
 model statistics 229–233, 243–244,
 325–346
 χ^2 345
 adjusted R^2 35–40, 343
 F 20–21, 26–32, 343

model statistics (*continued*)

log likelihood 345
 N . . 20–21, 26–32, 35–72, 229–233,
 243–244, 325–340, 343
 pseudo- R^2 345
 p -value 345
 R^2 . . 20–21, 26–32, 35–72, 229–233,
 243–244, 325–340, 343
 multinomial logistic regression
 294–298
 layouts 299–300
 raw coefficients 294–295
 RRR 294–295
 multiple models 234–244
 nested regression see nested
 regression
 table layouts 242–244
 multiple multivariate models . . 252–261
 table layouts 257–261
 multiple regression see also
 regression, 219–233
 model statistics 229–233
 table layouts 223–229
 multivariate models 245–252
 multiple see multiple
 multivariate models
 multivariate regression 245–248
 using `sem` command 248–252

N

N model statistic
 20–21, 26–32, 35–72, 229–233,
 243–244, 325–340, 343
 nested regression 445–455
 notes, customizing . . . 178–179, 305–308

O

omitted group, customizing display
 355–358

P

PDF files
 adding multiple notes 417–418
 adding superscripts 416–420
 adding text 415–416

- PDF files (*continued*)
- appending notes 419–420
 - appending text 415–417
 - appending titles 419–420
 - breaking lines 417–420
 - customizing text 415–416
 - dropping rows 418
 - exporting 414–420
 - formatting notes 416–418
 - formatting titles 416–417, 419–420
- plus or minus, using Unicode characters 10
- Poisson regression 292–293
- IRR 292
 - raw coefficients 292
 - zero-inflated *see* zero-inflated Poisson regression
- positioning intercept 222
- predefined styles 374–376
- pseudo- R^2 model statistic 345
- p -value
- format 304–305, 351–355
 - model statistic 345
 - stars 305–308
- R**
- R^2 model statistic 20–21, 26–32, 35–72, 229–233, 243–244, 325–340, 343
- R^2 , using Unicode characters 10
- reference level, customizing display 355–358
- regression
- beta coefficients ... 26–35, 314–315
 - factor-variable interaction *see* factor-variable interaction
 - hierarchical .. *see* nested regression
 - intercept position 222
 - logistic *see* logistic regression
 - model statistics ... 26–32, 243–244, 325–344
 - multinomial logistic *see* multinomial logistic regression
 - multiple *see* multiple regression
- regression (*continued*)
- multiple groups 35–40, 51–62, 67–72
 - multiple models 40–51, 57–72, 234–244
 - table layouts 242–244
 - multiple outcomes... 32–35, 51–57, 63–72
 - multivariate *see* multivariate regression
 - nested *see* nested regression
 - Poisson *see* Poisson regression
 - standardized coefficients... 26–35, 314–315
 - with factor variables *see* factor variables
 - zero-inflated Poisson *see* zero-inflated Poisson regression
- result** dimension 341–346
- results, formatting 12–14
- including commas 14
 - leading zeros 13
 - left-aligned 14
- row labels, customizing 318–319
- S**
- sample datasets 1
- sample frequency, customizing display .. 179–183, 188–189
- selecting cells
- for customization 359–364
 - multiple models 361–362
 - multiple outcomes 362–364
 - multiple regression 359–360
- significance stars 305–308
- simple contrasts 285–288
- simple effects 282–285
- standard errors, formatting ... 351–355
- standardized coefficients 26–35, 314–315
- stars, significance 305–308
- stored results 17–21

styles

- creating custom 365–374
- creating custom, with do-files.. 374
- using predefined 374–376
- subscripts, using Unicode characters...
..... 10
- summary statistics see composite
result
 - comparing groups 185–188
 - customizing column headers
..... 177–178
 - grouping results 210–212
- superscripts, using Unicode characters
..... 10

T*t* test

- by two groups 73–87
- with Cohen's *d* 77–80, 85–87

Table 1

- one group 112–114, 139–143,
207–209
- two groups 114–138, 209–212
- table contrasting marginal means...see
factor variables

table layouts

- multinomial logistic regression
..... 299–300
- multiple models 242–244
- multiple multivariate models.....
..... 257–261
- multiple regression 223–229

table of correlations... see correlations,
table oftable of marginal means, by factor vari-
ables see factor
variables

titles, customizing ... 178–179, 305–308

t-value, formatting 351–355**U**

Unicode characters 10

V

vertical lines, hiding 350–351

W

Word documents

- adding multiple notes 410–411
- adding superscripts 409–414
- adding text 408–409
- appending documents 9
- appending notes 412–414
- appending text 408–410
- appending titles 412–414
- breaking lines 410–414
- customizing text 408–409
- dropping rows 411–412
- exporting 6, 8, 405–414
- formatting notes 409–411
- formatting titles 409–410,
412–414

Z

- zero-inflated Poisson regression
..... 301–303
- IRR 302–303
